

AI transformation partner to financial institutions

■ OUR APPROACH

We identify business problems that actually matter and build AI solutions that solve them with real impact.

We focus on building powerful AI solutions that make the most impact for your business.

Himanshu Goyal

CO-FOUNDER

Himanshu is a persistent product builder who thrives at the intersection of business and technology. An engineering alumnus of BITS Pilani, he has spent over five years experimenting with LLMs and Gen AI.

His passion lies in leveraging these technologies to drive real, scalable business impact.

Gaurav Mandlecha

CO-FOUNDER

Gaurav is an astute sales leader who holds a double major in Economics and Mechanical Engineering from BITS Pilani.

A Pan Macmillan published author, his professional journey spans both at a VC fund and at early-stage startups, experiences that give him the joy of building.

■ OUR PAST EXPERIENCE

PAST EXPERIENCE SERVICING
GLOBAL **BFSI GIANTS**

SHIPPED AI PRODCUTS FOR BUSINESS
ACCELERATION FOR **ENTERPRISES**

EXPERIENCE WORKING WITH GEN-AI
SINCE 2020 - **BETA COHORT OPEN AI**

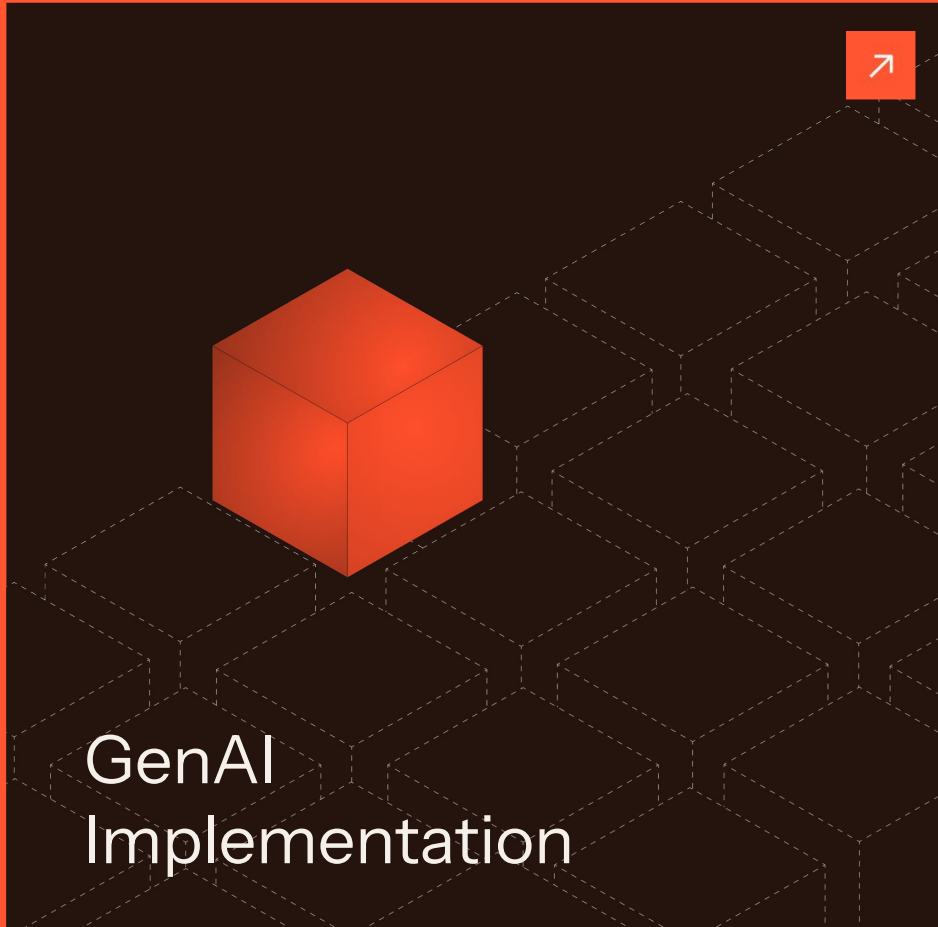

BUILT PLATFORMS FOR SCALE - 150K
MAU, **300M TRAFFIC/MONTH**

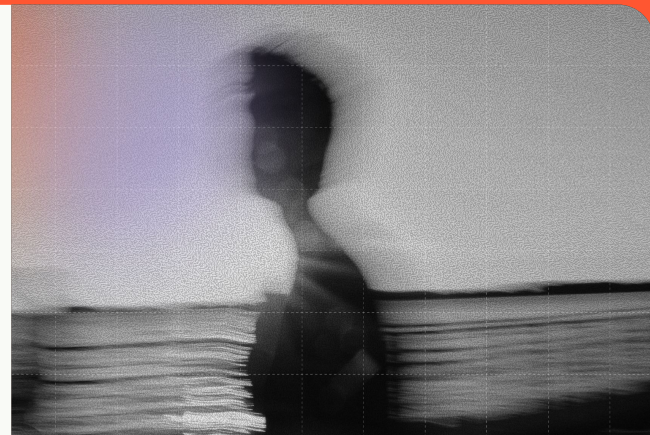

Accelerated Software
Development

GenAI
Implementation

Our AI-first approach helps us pinpoint growth opportunities, deliver quick wins and long-term impact the right-way.

AI CONSULTING & STRATEGY

We identify where AI can make the most impact for your business.

PROCESS AUTOMATION USING AI

We automate repetitive tasks, freeing your team from repetitive work.

CUSTOM TRAINED MODELS

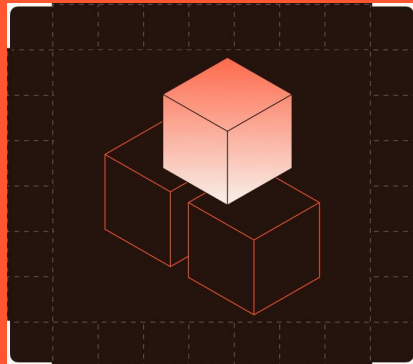

We optimize AI models to your data and your business needs.

AUTONOMOUS AGENT DEVELOPMENT

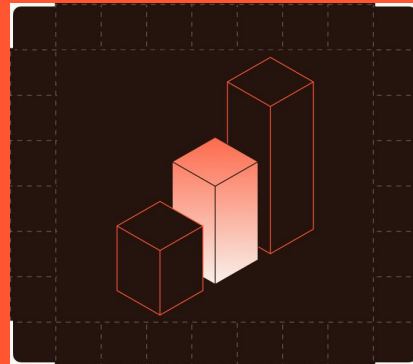

We build intelligent agents that can act, decide, deliver.

We ship secure, compliant BFSI software in half the time by leveraging AI tools and frameworks.

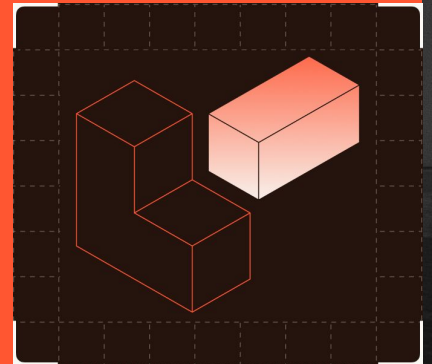

FASTER SOFTWARE DEVELOPMENT

IMPROVED COST SAVINGS

BUILT FOR HANDOVER

■ OPPORTUNITIES WE HAVE SOLVED USING AI

Sales Acceleration / Lead Qualification

■ USE CASE 1

Sales Acceleration and Lead Qualification

PROBLEM

High lead volume with inconsistent spikes made telecalling coverage impossible. Leads went cold before human agents could reach them, and scaling headcount wasn't viable for variable load.

APPROACH

Deployed an integrated Voice AI agent that auto-calls leads the moment they hit the CRM with intelligent retry logic and a standardized knowledge base for handling customer queries consistently.

OUTCOME

First contact within 2 minutes of lead capture. Handled 1.5x lead volume with zero headcount addition, while lifting connectivity rates.

■ OPPORTUNITIES WE HAVE SOLVED USING AI

Intelligent Assistants & Copilots

■ USE CASE 2

Intelligent Assistants & Copilots

PROBLEM

Credit underwriters across the country were navigating lengthy, complex policy documents with frequent deviation cases. Escalations to seniors slowed turnaround, and subjective interpretations led to non-standardized decisions.

APPROACH

Built a policy-aware chatbot trained on the full credit policy knowledge base, rolled out to underwriting teams across products and geographies enabling instant, consistent answers on demand.

OUTCOME

Underwriters now self-serve policy clarifications in minutes, reducing escalations and standardizing decision quality across the network.

■ OPPORTUNITIES WE HAVE SOLVED USING AI

Document Processing

■ USE CASE 3

Document Processing

PROBLEM

KYC verification (Aadhaar, PAN, photos etc) was entirely manual, teams downloaded each document, cross-checked against loan applications, and flagged discrepancies. Slow, repetitive, and a drag on skilled capacity.

APPROACH

Deployed a Vision AI agent that reads KYC documents, extracts key fields, auto-validates them against the loan application, and flags discrepancies for human review.

OUTCOME

Document processing time collapsed by 80% and the team was redeployed from mechanical checks to higher-judgment work like exception handling and fraud review.

■ OPPORTUNITIES WE HAVE SOLVED USING AI

Multilingual Content Automation

■ USE CASE 4

Multilingual Content Automation

PROBLEM

Learning & Development content for a geographically dispersed, multilingual frontline workforce was stuck in static English PDFs and PPTs. Field staff often with limited English proficiency weren't consuming it, and content constantly lagged policy updates.

APPROACH

Built an AI-powered video generation tool: upload any policy document, and the system auto-generates scripts, voiceovers, and multilingual videos — turning static content into engaging, localized learning in minutes.

OUTCOME

Generated 1000+ videos in 2 weeks. Learning reach and comprehension jumped across the frontline, with personalized journeys in every employee's preferred language.
